Key Features

Balanced PoE+ access design

C9350-24P is designed for deployments that require PoE+ for endpoints such as access points, IP phones, and cameras, without the complexity or cost of high-power UPoE models.

Right-sized port density for access closets

The 24-port form factor fits well in wiring closets where port demand is controlled, reducing unused capacity while maintaining enterprise-grade performance.

Clean migration path for PoE-based networks

Ideal for organizations upgrading from older PoE switches, allowing reuse of existing endpoint designs while modernizing the access layer platform.

Modular uplinks for future bandwidth growth

Modular uplink network modules allow the access layer to scale uplink capacity independently as traffic requirements increase.

High availability for powered endpoints

StackWise-1.6T and StackPower+ support help maintain service continuity for PoE-powered devices during maintenance or hardware events.

Long-term access platform standardization

As part of the Catalyst 9350 Series, C9350-24P supports long lifecycle planning with modern automation and telemetry capabilities.
